

## Congrats to Sufi & Kornel

Congratulations to Sufi Annoor and Kornel Pesti on passing their MEI checkrides. Sufi and Kornel are now certified instructors for the multi-engine add-on.

### **Congratulations to our instructor, Max Malloy, and his bride-to-be, Britt, on their engagement!**

Max surprised Britt with a flight and popped the question here at Fly Legacy Aviation. We are so excited to welcome Britt to the Legacy family and wish the couple many happy and healthy years together!

# English for Aviation

**Embark on a language journey designed for aspiring pilots and aviation professionals.**

**Are you an international aviation student aspiring to conquer the skies and communicate with confidence? Now, you have the opportunity to streamline your training efforts by enrolling in our specialized English Language Course tailored for Private Pilot students.**

#### **Customized for International Students:**

We understand the challenges that non-native speakers face and focus on helping you to learn faster.

#### **Instructors with Aviation Expertise:**

Our instructors possess hands-on aviation experience and a profound grasp of language barriers within the industry.

#### **Practical Solutions for Real Challenges:**

Dive into scenarios where international students often stumble, equipping yourself with practical skills to excel in aviation communication.

**Engaging Visual Learning:** Immerse yourself in dynamic video lessons simplifying intricate concepts and maintaining your engagement throughout your educational journey.

**Lifetime Access:** Learn at your preferred pace and revisit lessons whenever you require a skills refresher.

**Cost-Effective Approach:** Focus exclusively on the precise language skills essential for aviation, optimizing both your time and funds.

## GENE'S QUIZ ANSWERS

- 1 It requires ATC to provide radar vectors from after takeoff until reaching an assigned route or fix depicted on a SID chart.
- 2 Smoke layer aloft / breaks in overcast
- 3 It is a graphical weather advisory that may be hazardous to aircraft but less severe than a SIGMET.
- 4 When a bank angle exceeds 60 degrees or a pitch attitude is greater than 30 degrees
- 5 It begins at the surface and continues up to the overlying controlled airspace (class E) not to exceed 14,500 MSL.
- 6 Heading information will be lost.
